

**SIMPLE TO SELL.
EASY TO WORK WITH FROM ANYWHERE.**

New Wi-Fi® design makes communico

Attract more customers—and be more profitable—with the easy-to-sell, easy-to-install York® Residential Communicating Control with Wi-Fi® capability. It's a great way to look different from competitors, because the Communicating Control does just that: it communicates with your customers ... and with you! The interface is as friendly as a smartphone. For contractors, that means installation and troubleshooting routines are easy even for the inexperienced technician. And your customers can install our IntelliComfort™ app for iPhone®, Android® or other compatible devices to talk to their home comfort system over Wi-Fi®, 3G or 4G networks—enjoying the comfort and energy savings that fit today's mobile lifestyle.

Easy 4-wire installation.

Save installation time and hassles with familiar 4-wire connections for a fast link up to all York® Affinity™ gas furnaces, air conditioners, heat pumps and air handlers.

Plug and play saves time and money.

Get in sync instantly with an integrated control that reaches out and shakes hands with every piece of intelligent equipment to simplify configuration, monitoring and troubleshooting.

Stay on top of issues with automatic email alerts.

Ask your customers to provide you with access to automated system faults and notification alerts via email. You'll be able to respond to issues sooner and make your customers happier.

Heating and control easier than ever.

See exactly what's on your wall—in your hand.

On their smartphone or tablet device, homeowners will see the same screen they are used to seeing on their wall, simplifying the learning curve. It works the same because it practically is the same!

An inspired design.

Attract customers with a vibrant, friendly interface that looks as good as it feels thanks to sleek icons and a high-definition touch screen that complements every home's décor.

Keep customers in their comfort zone.

Easy access from your service van or office: Wi-Fi® communications capability gives you the option of remote access to the Communicating Control from your mobile device or desktop PC to simplify setup and troubleshooting.

Zone control for up to six zones/rooms appeals to owners of larger homes: Individualized control of every zone means precise comfort levels can be programmed from a single touch screen panel to make everybody happy.

Foresee problems with alert notifications: System status alerts can be sent as optional email notifications to alert your service tech about service or operational issues.

Talk to the system with built-in intelligence: Easily monitor the status and modify the parameters of every enabled system device—from the air conditioner to the furnace to the air handler—thanks to integrated smart control boards.

Keep customers more comfortable with advanced "Quick Heat and Cool" feature: This "speed up" feature temporarily puts the heating or cooling mode at the highest capacity to make homeowners feel more comfortable with their system.

Sell homeowners on energy savings: Multiple schedules and daily events can be easily programmed to reduce your customer's utility bills.

You're in perfect control in any situation.

You'll find that wiring the Communicating Control is easy, well, so is configuring. Contractor accessible menus allow notifications to be customized. For example, thermostat fault features can be accessed to let contractors:

- Set the level of information displayed if a fault occurs. For example, create simple generic messages for faults that require service—or create more detailed notifications for customers who live outside a regular service area to determine the level of service required.
- Set up your profile with your company information and logo. That way, if a fault occurs, your contractor contact information is displayed so customers know who to call. Add text displaying your company name, phone number, email—you even get an option to upload your logo.

We put you in control of a lot of smart products.

The Affinity™ Communicating Control combined with smart equipment controls provide a sense of comfort and confidence that comes with these intelligent Affinity™ products:

Affinity™ Series CZH and CZF Split System
Air Conditioners

Affinity™ Series YZH and YZF Split System
Heat Pumps

Affinity™ Series YP9C and YPLC Gas Furnaces

LX Series TM9V and TM8V Gas Furnaces

Affinity™ Series AHV and MV Air Handlers

Easy to sell, because it's from a controls leader.

In 1885, Warren Johnson inspired the future by inventing the first electric room thermostat. Today, that same principle of innovation is advancing residential comfort controls to make the indoor environments where we live, work and play more comfortable. Backed by a reputation like that, the Residential Communicating Control with Wi-Fi® support is easy to sell to homeowners who value quality and reliability.
